

The only kit  
your chair  
needs.

**CHAIRKIT**  
PRERIDE TO PERFORMANCE

## Chairkit – Austrian quality for the world

In 1989, founder Manfred Huber started to develop a system that was intended to guarantee trouble-free loading of chairlifts for winter sports enthusiasts. The first installation was in Tyrol, 1989. The company was soon transformed from a pioneer into a market leader, and work also commenced apart from winter business on a loading system for amusement rides of all kinds. Its North American subsidiary was founded in 2008.

Today Chairkit transports people faster, more efficiently and safer than ever before – in the winter on chairlifts, in the summer on amusement rides all over the world. At the same time, Chairkit ensures maximum user ease and safety, while providing a performance-enhancing effect for your installation.

## Chairkit – moves people to fun

With the Chairkit loading system you transport more people, faster, more efficiently and safer to your ride. Whether it is a fun ride, thrill ride, dark ride, water ride or rollercoaster – Chairkit ensures a trouble-free, safe and comfortable loading.

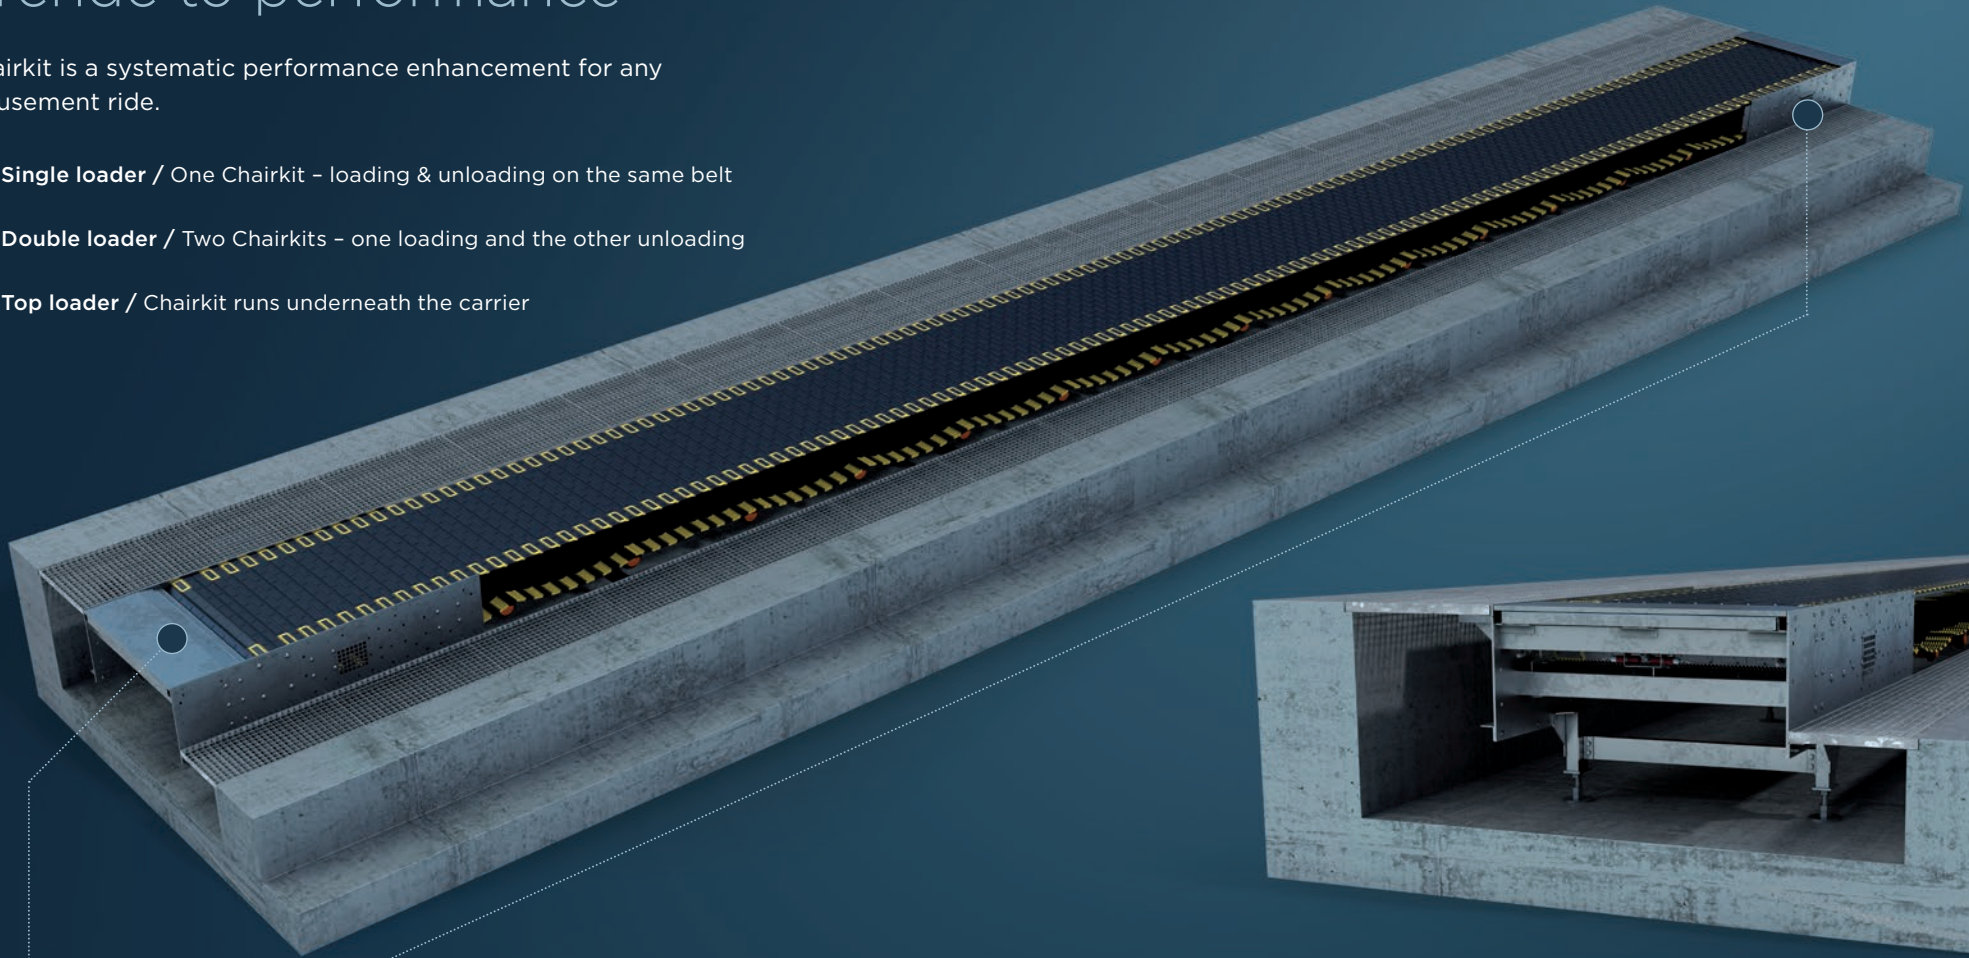

### ADVANTAGES:

- >> Less stops and slowdowns due to loading incidents
- >> Maximizes amusement ride efficiency & capacity
- >> Reduces staffing requirements
- >> Shorter & less stressful waiting lines
- >> Absolute safe transport
- >> Lower long term operating costs
- >> Elevates customer's ride satisfaction

# Preride to performance

Chairkit is a systematic performance enhancement for any amusement ride.

- >> **Single loader** / One Chairkit – loading & unloading on the same belt
- >> **Double loader** / Two Chairkits – one loading and the other unloading
- >> **Top loader** / Chairkit runs underneath the carrier

Transition safety device

Tachometer for belt speed

**Optional - for absolute efficiency**

## Easy Access

Do you want to control the number of your passengers exactly? The Chairkit Gate Easy Access ensures ideal portioning.

## Lane delineations

So your passengers know exactly where they stand. This saves time and also prevents shutdowns during full operation.
